

Plan the club lunch

Use your own words with a chatbot. Work individually or in pairs, in one conversation. Spend about five minutes on each part. Multiple menus can work.

Name(s), app and model: _____

Each person needs one meal and one drink. The total budget is \$200. All listed prices include taxes and fees. This is a fictional planning exercise; no actual order is placed.

1. Make a first plan / 0-5 minutes

You expect 24 people at tomorrow's noon lunch. The supplier offers chicken sandwiches for \$6, vegetarian wraps for \$5, and drinks for \$1. Delivery costs \$12 for the whole order. Your total budget is \$200; all prices include taxes and fees.

Propose an order with your chatbot. Decide what it needs to know and what you would check before committing.

Your record: Record your proposed quantities and total. What is still unknown?

2. The guest list changes / 5-10 minutes

There will now be 30 people, including 8 vegetarians. The supplier has only 18 chicken sandwiches, but enough vegetarian wraps and drinks. The total budget is still \$200. Everyone still needs one meal and one drink.

Update the same conversation. Check the revised order against the new facts and the earlier requirements.

Your record: Record the revised quantities and total. What changed, and did the chatbot remember the other constraints?

When the plan changes

3. Delivery falls through / 10-15 minutes

The supplier's earliest delivery is 12:30 p.m., after the noon lunch starts. Pickup is available at 11:15 a.m. and removes the \$12 delivery fee. A club member might collect the order, but they have not confirmed.

Explore a workable proposal. Decide what you can settle now and what still needs a person to confirm. Keep all earlier constraints in view.

Your record: Record a provisional plan and the confirmation it still needs. Has the chatbot treated a possibility as a promise?

4. Close the loop / 15-20 minutes

The club member confirms that they can collect the order at 11:15 a.m. and bring it to the lunch before noon.

Finish a short proposal with quantities, cost and pickup details. Check all the facts, then reflect on the conversation.

Your record: Record the final proposal, one thing the chatbot did well, one check or correction you made, and why the planning task is finished.

No chatbot? Take turns proposing and checking the plans with a partner. Submit your four short records wherever your instructor specifies.
